Bengaluru, Karnataka

Summary

AI Engineer with 1+ year of hands-on experience building Generative AI applications, AI Agents, Retrieval-Augmented Generation (RAG) systems, workflow automation, and LLM-powered enterprise solutions. Experienced in LangChain, LangGraph, OpenAI, Azure OpenAI, Ollama, Hugging Face, Vector Databases, FastAPI, Python, n8n, and cloud deployment. Built production-ready AI applications for healthcare, insurance, and enterprise automation using multi-agent architectures, prompt engineering, and REST APIs.

Certification

- The Complete Python Pro Bootcamp - Certification – Udemy. Oct - 2025
- Trigent Software Pvt. Ltd.-Gen AI Developer. Nov|2025 – June|2026

Skills

- Programming Languages:** Python, JavaScript (Basic), SQL
- Generative AI & LLMs:** Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Prompt Engineering, AI Agents, AI Automation, Vector Databases.
- Data Analytics Tools:** Power BI, Tableau, Google Sheets.
- Frameworks & Tools:** LangChain, Flowise, OpenWebUI, Ollama, n8n, Streamlit
- APIs & Integration:** REST APIs, Postman, Slack API Integration, Groq API, Workflow Automation
- Databases & Cloud:** MySQL, Vector Databases, Git, GitHub
- Development & Deployment:** Agile Methodology, Debugging, Testing, End-to-End AI Pipelines, Application Deployment.

Work Experience

Trigent Software Pvt. Ltd. |Gen AI Developer Intern

Nov|2025 – June|2026

Medical Report Summarization using LLM

- Developed a Generative AI-based Medical Report Summarization system using Large Language Models (LLMs) and Retrieval-Augmented Generation (RAG) techniques.
- Processed and summarized 1,000+ clinical documents using Python, NLP, and Prompt Engineering to generate accurate and concise medical insights.
- Reduced manual report review time by 50% through automated summary generation.

Doc-Request Agent – AI Underwriting Automation

- Built an AI automation agent to track and follow up on missing underwriting documents using API-based workflows and intelligent notifications.
- Automated document request management, improving process efficiency and reducing follow-up delays.
- Increased underwriting process efficiency by 40% through automated document verification and request management.

AI-Powered Discharge Instruction Generator

- Developed an AI-powered Discharge Instruction Generator using n8n, OpenWebUI, and Groq LLM to automate the generation of personalized patient discharge instructions from structured clinical inputs.
- Designed and implemented an end-to-end workflow automation in n8n, orchestrating data collection, AI inference, and automated delivery of discharge summaries to healthcare teams via Slack.
- Integrated Generative AI, Prompt Engineering, and workflow automation to standardize clinical documentation, reduce manual effort, improve consistency, and accelerate the discharge process.

Education Details

- Bachelor of Engineering**
S.D.M College of Engineering and Technology, Dharwad

July-2025
